

## Existing & Default Values in Metadata

### Status

This document is a request for a specification change for review.

### Summary

OSID Consumers of create and update operations require knowledge of default values supplied by an OSID Provider that is currently not available via `OsidObjects` or `OsidForms`. This request describes enhancements to Metadata to make such information available.

## 1. Current Specification

For the purposes of this request, an `OsidObject` is any independently managed Identifiable with a corresponding `OsidForm`.

To create an `OsidObject`, an OSID Consumer requests an `OsidForm` for create. The `OsidForm` provides access to the elements that may be supplied by the OSID Consumer. The syntax of the element and its requiredness is communicated through the element's Metadata. For optional `OsidForm` elements that are mandatory in the corresponding `OsidObject`, it is presumed that the OSID Provider assigns some default value. For all elements, `Metadata.hasValue()` should be false since nothing has been previously supplied by an OSID Consumer.

To update an `OsidObject`, an OSID Consumer requests an `OsidForm` for update. The `OsidForm` provides access to the elements that may be changed. The syntax of the element and its ability to be modified is communicated via Metadata. `Metadata.hasValue()` may be true or false depending on if a default value has been assigned by an OSID Provider.

`Metadata.hasValue()` helps an OSID Consumer discern between what it is seeing in the `OsidForm` and the accompanying `OsidObject`. The information in the `OsidObject` may have been assigned by either the OSID Consumer or defaulted by the OSID Provider.

`OsidForms` typically have a mechanism to "clear" an element's value if the element's `Metadata.isRequired()` is false. The intent of these clear methods remove the value set by an OSID Consumer in a prior create or update operation. The OSID Provider must revert the element to some default value if it is also mandatory in the corresponding `OsidObject`.

## 2. Problem

1. An OSID Consumer must consume both the read-only `OsidObject` and the `OsidForm` if it wishes to communicate the existing data for updates. This requires a data-level orchestration between two categories of functionality where there is typically a service boundary. For example, what is seen through an `OsidObject` retrieved from a lookup or search session should line up with what the `OsidForm` retrieved from an admin session is communicating. In some scenarios, this alignment requires OSID Consumers to use different OSID Providers, one whose `OsidObjects` are tuned for user viewing and another tuned for administration.
2. An OSID Consumer has no way of knowing what these default values are until the create or update operation is processed.

### 3. Proposed Change

Expand the Metadata definition to include for each primitive, the existing data value and what the default value would be if not set or cleared. String example:

```
/**
 * Tests if an existing value is known for this data element. If it
 * is known that a value does not exist, then this method returns true.
 *
 * @return true if the element value is known, false if the element
 *         value is not known
 */
boolean isValueKnown();

/**
 * Gets the default string values. These are the values used if the
 * element value is not provided or is cleared. If isArray() is false,
 * then this method at most returns a single value.
 *
 * @return the default string values
 * @throws ILLEGAL_STATE syntax is not a STRING or isRequired() is true
 */
String[] Metadata.getDefaultStringValue();

/**
 * Gets the existing string values. If hasValue() and isRequired()
 * are false, then these values are the default values. If isArray()
 * is false, then this method at most returns a single value.
 *
 * @return the existing string values
 * @throws ILLEGAL_STATE syntax is not a STRING or isValueKnown() is false
 */
String[] Metadata.getExistingStringValue();
```

Because an OsidForm input field may accept multiple values, the methods were defined as returning an array of primitives. If `Metadata.isArray()` is false, then a single value should be returned from these methods to be compliant.

The availability of default values is contingent upon the `Metadata.isRequired()`. If an element value is required, then the OSID Consumer must supply a value and the element value cannot be cleared on update.

The availability of the existing element values is contingent upon `Metadata.isValueKnown()`. `Metadata.hasValue()` is changed to also be contingent upon `Metadata.isValueKnown()`.

The following lists scenarios in the operation of Metadata with the proposed changes.

### 3.1. Metadata Usage With Known Values

#### Creation of Optional String Element With Known Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== true
Metadata.hasValue()	== false
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== {}

#### Creation of Required String Element With Known Value

Metadata.isRequired()	== true
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== true
Metadata.hasValue()	== false
Metadata.getDefaultStringValues()	== NA
Metadata.getExistingStringValues()	== {}

#### Creation of a Read-Only String Element With Known Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== true
Metadata.isValueKnown()	== true
Metadata.hasValue()	== false
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== {}

#### Update of Optional String Element With Known and Existing Default Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== true
Metadata.hasValue()	== false
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== {"default value"}

#### Update of Optional String Element With Known and Existing Non-Default Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== true
Metadata.hasValue()	== true
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== {"existing value"}

### Update of Required String Element With Known Value

Metadata.isRequired()	== true
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== true
Metadata.hasValue()	== true
Metadata.getDefaultStringValues()	== NA
Metadata.getExistingStringValues()	== {"existing value"}

### Update of a Read-Only String Element With Known Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== true
Metadata.isValueKnown()	== true
Metadata.hasValue()	== true
Metadata.getDefaultStringValues()	== {}
Metadata.getExistingStringValues()	== {"existing value"}

## 3.2. Metadata Usage With Unknown Values

### Creation of Optional String Element With Unknown Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== false
Metadata.hasValue()	== NA
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== NA

### Creation of Required String Element With Unknown Value

Metadata.isRequired()	== true
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== false
Metadata.hasValue()	== NA
Metadata.getDefaultStringValues()	== NA
Metadata.getExistingStringValues()	== NA

### Creation of a Read-Only String Element With Unknown Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== true
Metadata.isValueKnown()	== false
Metadata.hasValue()	== NA
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== NA

### Update of Optional String Element With With Unknown and Default Values

Metadata.isRequired()	== false
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== false
Metadata.hasValue()	== NA
Metadata.getDefaultStringValues()	== {"default value"}
Metadata.getExistingStringValues()	== NA

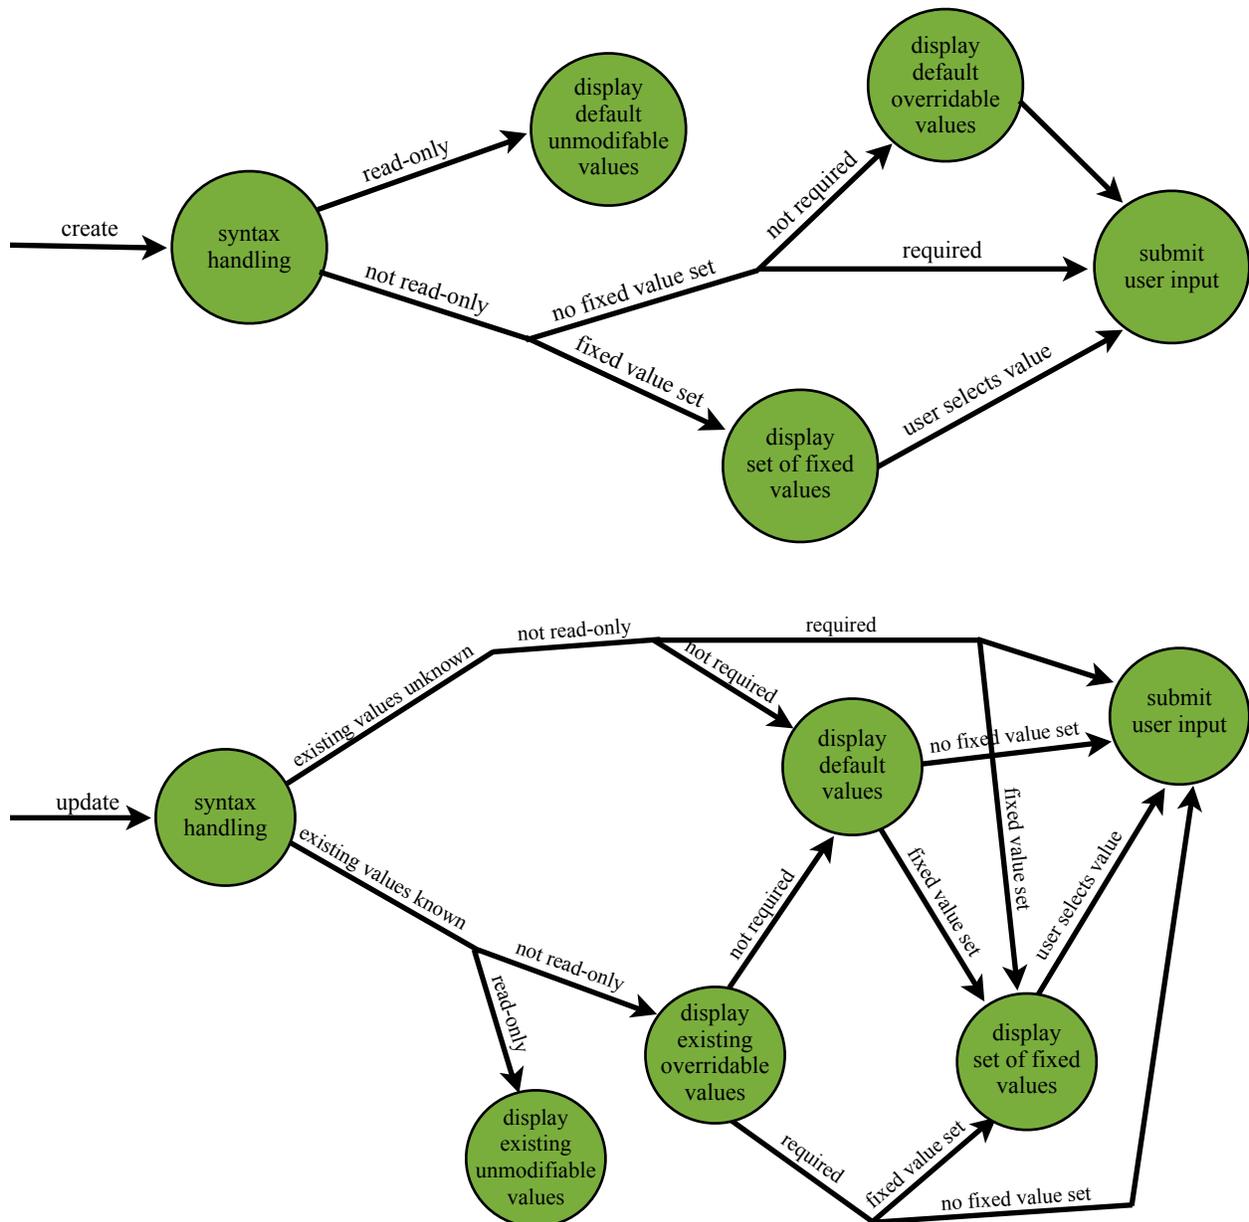

### Update of Required String Element With Unknown Value

Metadata.isRequired()	== true
Metadata.isReadOnly()	== false
Metadata.isValueKnown()	== false
Metadata.hasValue()	== NA
Metadata.getDefaultStringValues()	== NA
Metadata.getExistingStringValues()	== NA

### Update of a Read-Only String Element With Unknown Value

Metadata.isRequired()	== false
Metadata.isReadOnly()	== true
Metadata.isValueKnown()	== true
Metadata.hasValue()	== false
Metadata.getDefaultStringValues()	== {}
Metadata.getExistingStringValues()	== NA

### 3.3. Application Flow

## 4. Impacts

### 4.1. Specification

Changes are isolated to the Metadata interface used by all OsidForms. Changes are restricted to the addition of new methods. Metadata would be significantly larger in terms of overall number of methods, but the growing size is also due to having a single metadata

interface as opposed to a specific one for each primitive. The single interface model does help an OSID Consumer construct handlers for painting screens.

#### **4.2. OSID Consumers**

No impacts on OSID Consumers since no interface methods are changed or removed. However, the complexity around the interpretation of Metadata has increased for those OSID Consumers taking advantage of these new mechanisms.

#### **4.3. OSID Providers**

OSID Providers would be expected to implement the new Metadata methods. For create operations, OSID Providers would need to supply default values in Metadata. For update operations, OSID Providers would need to supply default values to communicate what occurs upon a clear operation. OSID Providers may optionally supply the existing values if `Metadata.isValueKnown()` and `Metadata.hasValue()` are both true.

### **5. Interoperability Considerations**

This change to Metadata allows an OSID Consumer to understand existing element values within the context of update operations without having to infer them through an `OsidObject`. A single OSID Provider can support both retrieval and update of `OsidObjects` where the view through the `OsidObject` differs from how the input data is managed.

The OSID Provider can optionally provide more information about the underlying data allowing for both data aware and data blind providers.

There is no change in that an OSID Provider must have access to the existing `OsidObject Id` to support a single update operation. The existing specification also requires fulfillment of `Metadata.hasValue()`. OSID Providers were unable perform update operations without any knowledge of the underlying data because `Metadata.hasValue()` could not communicate "I don't know."

The proposed method, `Metadata.isValueKnown()`, communicates that the OSID Provider does not know about the existing element values. This splits the path for the OSID Consumer on update, but allows for updates blind to the underlying data outside the `Id` verification for single update operations.

## 6. Proposed Metadata Interface

<i>Interface</i>	<b>osid.Metadata</b>	
<b>Implements</b>		
<b>Description</b>	The Metadata interface defines a set of methods describing a the syntax and rules for creating and updating a data element inside an OsidForm. This interface provides a means to retrieve special restrictions placed upon data elements such as sizes and ranges that may vary from provider to provider or from object to object.	
<b>Method</b>	<b>getElementId</b>	
<b>Description</b>	Gets a unique Id for the data element.	
<b>Return</b>	<a href="#">osid.id.Id</a>	an Id
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getElementLabel</b>	
<b>Description</b>	Gets a display label for the data element.	
<b>Return</b>	<a href="#">osid.locale.DisplayText</a>	a display label
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getInstructions</b>	
<b>Description</b>	Gets instructions for updating this element value. This is a human readable description of the data element or property that may include special instructions or caveats to the end-user above and beyond what this interface provides.	
<b>Return</b>	<a href="#">osid.locale.DisplayText</a>	instructions
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getSyntax</b>	
<b>Description</b>	Gets the syntax of this data.	
<b>Return</b>	<a href="#">osid.Syntax</a>	an enumeration indicating the type of value
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>isArray</b>	
<b>Description</b>	Tests if this data element is an array.	
<b>Return</b>	<a href="#">boolean</a>	true if this data is an array, false if a single element
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>isRequired</b>	
<b>Description</b>	Tests if this data element is required for creating new objects.	
<b>Return</b>	<a href="#">boolean</a>	true if this element value is required, false otherwise
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>isReadOnly</b>	
<b>Description</b>	Tests if this data can be updated. This may indicate the result of a pre-authorization but is not a guarantee that an authorization failure will not occur when the create or update transaction is issued.	
<b>Return</b>	<a href="#">boolean</a>	true if this data is not updatable, false otherwise
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>isLinked</b>	
<b>Description</b>	Tests if this data element is linked to other data in the object. Updating linked data elements should refresh all metadata and revalidate object elements.	
<b>Return</b>	<a href="#">boolean</a>	true if this element is linked, false if updates have no side effect

<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>isValueKnown</b>	
<b>Description</b>	Tests if an existing value is known for this data element. If it is known that a value does not exist, then this method returns true.	
<b>Return</b>	<a href="#">boolean</a>	true if the element value is known, false if the element value is not known
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>hasValue</b>	
<b>Description</b>	Tests if this data element has a set non-default value.	
<b>Return</b>	<a href="#">boolean</a>	true if this element value has been set, false otherwise
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getUnits</b>	
<b>Description</b>	Gets the units of this data for display purposes ('lbs', 'gills', 'furlongs').	
<b>Return</b>	<a href="#">osid.locale.DisplayText</a>	the display units of this data or an empty string if not applicable
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumElements</b>	
<b>Description</b>	In the case where an array or list of elements is specified in an OsidForm, this specifies the minimum number of elements that must be included.	
<b>Return</b>	<a href="#">cardinal</a>	the minimum elements or 1 if isArray() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumElements</b>	
<b>Description</b>	In the case where an array or list of elements is specified in an OsidForm, this specifies the maximum number of elements that can be specified.	
<b>Return</b>	<a href="#">cardinal</a>	the maximum elements or 1 if isArray() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumCardinal</b>	
<b>Description</b>	Gets the minimum cardinal value.	
<b>Return</b>	<a href="#">cardinal</a>	the minimum cardinal
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CARDINAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumCardinal</b>	
<b>Description</b>	Gets the maximum cardinal value.	
<b>Return</b>	<a href="#">cardinal</a>	the maximum cardinal
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CARDINAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getCardinalSet</b>	
<b>Description</b>	Gets the set of acceptable cardinal values.	
<b>Return</b>	<a href="#">cardinal[]</a>	a set of cardinals or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CARDINAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultCardinalValues</b>	
<b>Description</b>	Gets the default cardinal values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">cardinal[]</a>	the default cardinal values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CARDINAL or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.

<b>Method</b>	<b>getExistingCardinalValues</b>		
<b>Description</b>	Gets the existing cardinal values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.		
<b>Return</b>	<a href="#">cardinal[]</a>	the existing cardinal values	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CARDINAL or isValueKnown() is false	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getCoordinateTypes</b>		
<b>Description</b>	Gets the set of acceptable coordinate types.		
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the set of coordinate types	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE or SPATIALUNIT	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>supportsCoordinateType</b>		
<b>Description</b>	Tests if the given coordinate type is supported.		
<b>Parameters</b>	<a href="#">osid.type.Type</a>	coordinateType	a coordinate Type
<b>Return</b>	<a href="#">boolean</a>	true if the type is supported, false otherwise	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE	
	<a href="#">NULL_ARGUMENT</a>	coordinateType is null	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getAxesForCoordinateType</b>		
<b>Description</b>	Gets the number of axes for a given supported coordinate type.		
<b>Parameters</b>	<a href="#">osid.type.Type</a>	coordinateType	a coordinate Type
<b>Return</b>	<a href="#">cardinal</a>	the number of axes	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE	
	<a href="#">NULL_ARGUMENT</a>	coordinateType is null	
	<a href="#">UNSUPPORTED</a>	supportsCoordinateType(coordinateType) is false	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getMinimumCoordinateValues</b>		
<b>Description</b>	Gets the minimum coordinate values given supported coordinate type.		
<b>Parameters</b>	<a href="#">osid.type.Type</a>	coordinateType	a coordinate Type
<b>Return</b>	<a href="#">decimal[]</a>	the minimum coordinate values	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE	
	<a href="#">NULL_ARGUMENT</a>	coordinateType is null	
	<a href="#">UNSUPPORTED</a>	supportsCoordinateType(coordinateType) is false	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getMaximumCoordinateValues</b>		
<b>Description</b>	Gets the maximum coordinate values given supported coordinate type.		
<b>Parameters</b>	<a href="#">osid.type.Type</a>	coordinateType	a coordinate Type
<b>Return</b>	<a href="#">decimal[]</a>	the maximum coordinate values	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE	
	<a href="#">NULL_ARGUMENT</a>	coordinateType is null	
	<a href="#">UNSUPPORTED</a>	supportsCoordinateType(coordinateType) is false	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getCoordinateSet</b>		
<b>Description</b>	Gets the set of acceptable coordinate values.		
<b>Return</b>	<a href="#">osid.mapping.Coordinate[]</a>	a set of coordinates or an empty array if not restricted	

<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultCoordinateValues</b>	
<b>Description</b>	Gets the default coordinate values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Coordinate[]</a>	the default coordinate values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingCoordinateValues</b>	
<b>Description</b>	Gets the existing coordinate values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Coordinate[]</a>	the existing coordinate values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a COORDINATE or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getCurrencyTypes</b>	
<b>Description</b>	Gets the set of acceptable currency types.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the set of currency types
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CURRENCY
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>supportsCurrencyType</b>	
<b>Description</b>	Tests if the given currency type is supported.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	currencyType a currency Type
<b>Return</b>	<a href="#">boolean</a>	true if the type is supported, false otherwise
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not a CURRENCY currencyType is null
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumCurrency</b>	
<b>Description</b>	Gets the minimum currency value.	
<b>Return</b>	<a href="#">osid.financials.Currency</a>	the minimum currency
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CURRENCY
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumCurrency</b>	
<b>Description</b>	Gets the maximum currency value.	
<b>Return</b>	<a href="#">osid.financials.Currency</a>	the maximum currency
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CURRENCY
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getCurrencySet</b>	
<b>Description</b>	Gets the set of acceptable currency values.	
<b>Return</b>	<a href="#">osid.financials.Currency[]</a>	a set of currencies or an empty array if not
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CURRENCY
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultCurrencyValues</b>	
<b>Description</b>	Gets the default currency values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.financials.Currency[]</a>	the default currency values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CURRENCY or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.

<b>Method</b>	<b>getExistingCurrencyValues</b>	
<b>Description</b>	Gets the existing currency values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.financials.Currency[]</a>	the existing currency values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a CURRENCY or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDateTimeResolution</b>	
<b>Description</b>	Gets the smallest resolution of the date time value.	
<b>Return</b>	<a href="#">osid.calendaring.DateTimeResolution</a>	the resolution
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME, DURATION, or TIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getCalendarTypes</b>	
<b>Description</b>	Gets the set of acceptable calendar types.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the set of calendar types
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME or DURATION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>supportsCalendarType</b>	
<b>Description</b>	Tests if the given calendar type is supported.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	calendarType a calendar Type
<b>Return</b>	<a href="#">boolean</a>	true if the type is supported, false otherwise
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not a DATETIME or DURATION calendarType is null
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getTimeTypes</b>	
<b>Description</b>	Gets the set of acceptable time types.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	a set of time types or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME, DURATION, or TIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>supportsTimeType</b>	
<b>Description</b>	Tests if the given time type is supported.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	timeType a time Type
<b>Return</b>	<a href="#">boolean</a>	true if the type is supported, false otherwise
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not a DATETIME, DURATION, or TIME timeType is null
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumDateTime</b>	
<b>Description</b>	Gets the minimum date time value.	
<b>Return</b>	<a href="#">osid.calendaring.DateTime</a>	the minimum value
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumDateTime</b>	
<b>Description</b>	Gets the maximum date time value.	
<b>Return</b>	<a href="#">osid.calendaring.DateTime</a>	the maximum value
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDateTimeSet</b>	

<b>Description</b>	Gets the set of acceptable date time values.	
<b>Return</b>	<a href="#">osid.calendaring.DateTime[]</a>	a set of values or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultDateTimeValues</b>	
<b>Description</b>	Gets the default date time values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.calendaring.DateTime[]</a>	the default date time values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingDateTimeValues</b>	
<b>Description</b>	Gets the existing date time values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.calendaring.DateTime[]</a>	the existing date time values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DATETIME or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDecimalScale</b>	
<b>Description</b>	Gets the number of digits to the right of the decimal point.	
<b>Return</b>	<a href="#">cardinal</a>	the scale
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DECIMAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumDecimal</b>	
<b>Description</b>	Gets the minimum decimal value.	
<b>Return</b>	<a href="#">decimal</a>	the minimum decimal
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DECIMAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumDecimal</b>	
<b>Description</b>	Gets the maximum decimal value.	
<b>Return</b>	<a href="#">decimal</a>	the maximum decimal
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DECIMAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDecimalSet</b>	
<b>Description</b>	Gets the set of acceptable decimal values.	
<b>Return</b>	<a href="#">decimal[]</a>	a set of decimals or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DECIMAL
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultDecimalValues</b>	
<b>Description</b>	Gets the default decimal values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">decimal[]</a>	the default decimal values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DECIMAL or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingDecimalValues</b>	
<b>Description</b>	Gets the existing decimal values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">decimal[]</a>	the existing decimal values

<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DECIMAL or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDistanceResolution</b>	
<b>Description</b>	Gets the smallest resolution of the distance value.	
<b>Return</b>	<a href="#">osid.mapping.DistanceResolution</a>	the resolution
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DISTANCE
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumDistance</b>	
<b>Description</b>	Gets the minimum distance value.	
<b>Return</b>	<a href="#">osid.mapping.Distance</a>	the minimum value
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DISTANCE
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumDistance</b>	
<b>Description</b>	Gets the maximum distance value.	
<b>Return</b>	<a href="#">osid.mapping.Distance</a>	the maximum value
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DISTANCE
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDistanceSet</b>	
<b>Description</b>	Gets the set of acceptable distance values.	
<b>Return</b>	<a href="#">osid.mapping.Distance[]</a>	a set of values or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DISTANCE
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultDistanceValues</b>	
<b>Description</b>	Gets the default distance values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Distance[]</a>	the default distance values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DISTANCE or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingDistanceValues</b>	
<b>Description</b>	Gets the existing distance values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Distance[]</a>	the existing distance values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DISTANCE or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumDuration</b>	
<b>Description</b>	Gets the minimum duration.	
<b>Return</b>	<a href="#">osid.calendaring.Duration</a>	the minimum duration
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DURATION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumDuration</b>	
<b>Description</b>	Gets the maximum duration.	
<b>Return</b>	<a href="#">osid.calendaring.Duration</a>	the maximum duration
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DURATION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDurationSet</b>	
<b>Description</b>	Gets the set of acceptable duration values.	
<b>Return</b>	<a href="#">osid.calendaring.Duration[]</a>	a set of durations or an empty array if not restricted

<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DURATION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultDurationValues</b>	
<b>Description</b>	Gets the default duration values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most at most a single value.	
<b>Return</b>	<a href="#">osid calendaring.Duration[]</a>	the default duration values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DURATION or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingDurationValues</b>	
<b>Description</b>	Gets the existing duration values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid calendaring.Duration[]</a>	the existing duration values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a DURATION or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getHeadingTypes</b>	
<b>Description</b>	Gets the set of acceptable heading types.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	a set of heading types or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a HEADING
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>supportsHeadingType</b>	
<b>Description</b>	Tests if the given heading type is supported.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	headingType a heading Type
<b>Return</b>	<a href="#">boolean</a>	true if the type is supported, false otherwise
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not a HEADING headingType is null
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getAxesForHeadingType</b>	
<b>Description</b>	Gets the number of axes for a given supported heading type.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	headingType a heading Type
<b>Return</b>	<a href="#">cardinal</a>	the number of axes
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a> <a href="#">UNSUPPORTED</a>	syntax is not a HEADING headingType is null supportsHeadingType(headingType) is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumHeadingValues</b>	
<b>Description</b>	Gets the minimum heading values given supported heading type.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	headingType a heading Type
<b>Return</b>	<a href="#">decimal[]</a>	the minimum heading values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a> <a href="#">UNSUPPORTED</a>	syntax is not a HEADING headingType is null supportsHeadingType(headingType) is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumHeadingValues</b>	
<b>Description</b>	Gets the maximum heading values given supported heading type.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	headingType a heading Type
<b>Return</b>	<a href="#">decimal[]</a>	the maximum heading values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not a HEADING headingType is null

	<a href="#">UNSUPPORTED</a>	supportsHeadingType(headingType) is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getHeadingSet</b>	
<b>Description</b>	Gets the set of acceptable heading values.	
<b>Return</b>	<a href="#">osid.mapping.Heading[]</a>	the set of heading
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a HEADING
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultHeadingValues</b>	
<b>Description</b>	Gets the default heading values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Heading[]</a>	the default heading values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a HEADING or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingHeadingValues</b>	
<b>Description</b>	Gets the existing heading values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Heading[]</a>	the existing heading values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a HEADING or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getIdSet</b>	
<b>Description</b>	Gets the set of acceptable Ids.	
<b>Return</b>	<a href="#">osid.id.Id[]</a>	a set of Ids or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not an ID
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultIdValues</b>	
<b>Description</b>	Gets the default Id values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.id.Id[]</a>	the default Id values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not an ID or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingIdValues</b>	
<b>Description</b>	Gets the existing Id values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.id.Id[]</a>	the existing Id values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not an ID
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumInteger</b>	
<b>Description</b>	Gets the minimum integer value.	
<b>Return</b>	<a href="#">integer</a>	the minimum value
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not an INTEGER
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumInteger</b>	
<b>Description</b>	Gets the maximum integer value.	
<b>Return</b>	<a href="#">integer</a>	the maximum value
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not an INTEGER
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getIntegerSet</b>	
<b>Description</b>	Gets the set of acceptable integer values.	
<b>Return</b>	<a href="#">integer[]</a>	a set of values or an empty array if not restricted

Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not an INTEGER
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getDefaultIntegerValues</b>	
Description	Gets the default integer values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
Return	<a href="#">integer[]</a>	the default integer values
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not an INTEGER or isRequired() is true
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getExistingIntegerValues</b>	
Description	Gets the existing integer values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
Return	<a href="#">integer[]</a>	the existing integer values
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not a INTEGER or isValueKnown() is false
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getObjectTypes</b>	
Description	Gets the set of acceptable Types for an arbitrary object.	
Return	<a href="#">osid.type.Type[]</a>	a set of Types or an empty array if not restricted
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not an OBJECT
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>supportsObjectType</b>	
Description	Tests if the given object type is supported.	
Parameters	<a href="#">osid.type.Type</a>	objectType
Return	<a href="#">boolean</a>	true if the type is supported, false otherwise
Errors	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not an OBJECT objectType is null
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getObjectSet</b>	
Description	Gets the set of acceptable object values.	
Return	<a href="#">object[]</a>	a set of values or an empty array if not restricted
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not an OBJECT
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getDefaultObjectValues</b>	
Description	Gets the default object values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
Return	<a href="#">object[]</a>	the default object values
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not an OBJECT or isRequired() is true
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getExistingObjectValues</b>	
Description	Gets the existing object values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
Return	<a href="#">object[]</a>	the existing object values
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not an OBJECT or isValueKnown() is false
Compliance	<a href="#">mandatory</a>	This method must be implemented.
Method	<b>getSpatialUnitRecordTypes</b>	
Description	Gets the set of acceptable spatial unit record types.	
Return	<a href="#">osid.type.Type[]</a>	the set of spatial unit types
Errors	<a href="#">ILLEGAL_STATE</a>	syntax is not SPATIALUNIT

<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>supportsSpatialUnitRecordType</b>	
<b>Description</b>	Tests if the given spatial unit record type is supported.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	spatialUnitRecordTyp
<b>Return</b>	<a href="#">boolean</a>	a spatial unit record Type
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	true if the type is supported, false otherwise syntax is not an SPATIALUNIT spatialUnitRecordType is null
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getSpatialUnitSet</b>	
<b>Description</b>	Gets the set of acceptable spatial unit values.	
<b>Return</b>	<a href="#">osid.mapping.SpatialUnit[]</a>	a set of spatial units or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPATIALUNIT
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultSpatialUnitValues</b>	
<b>Description</b>	Gets the default spatial unit values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.SpatialUnit[]</a>	the default spatial unit values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPATIALUNIT or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingSpatialUnitValues</b>	
<b>Description</b>	Gets the existing spatial unit values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single	
<b>Return</b>	<a href="#">osid.mapping.SpatialUnit[]</a>	the existing spatial unit values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPATIALUNIT or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumSpeed</b>	
<b>Description</b>	Gets the minimum speed value.	
<b>Return</b>	<a href="#">osid.mapping.Speed</a>	the minimum speed
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPEED
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumSpeed</b>	
<b>Description</b>	Gets the maximum speed value.	
<b>Return</b>	<a href="#">osid.mapping.Speed</a>	the maximum speed
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPEED
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getSpeedSet</b>	
<b>Description</b>	Gets the set of acceptable speed values.	
<b>Return</b>	<a href="#">osid.mapping.Speed[]</a>	a set of speeds or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPEED
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultSpeedValues</b>	
<b>Description</b>	Gets the default speed values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.mapping.Speed[]</a>	the default speed values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPEED or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingSpeedValues</b>	

<b>Description</b>	Gets the existing speed values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.		
<b>Return</b>	<a href="#">osid.mapping.Speed[]</a>	the existing speed values	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a SPEED or isValueKnown() is false	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getMinimumStringLength</b>		
<b>Description</b>	Gets the minimum string length.		
<b>Return</b>	<a href="#">cardinal</a>	the minimum string length	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getMaximumStringLength</b>		
<b>Description</b>	Gets the maximum string length.		
<b>Return</b>	<a href="#">cardinal</a>	the maximum string length	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getStringMatchTypes</b>		
<b>Description</b>	Gets the set of valid string match types for use in validating a string. If the string match type indicates a regular expression then getStringExpression() returns a regular expression.		
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the set of string match types	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>supportsStringMatchType</b>		
<b>Description</b>	Tests if the given string match type is supported.		
<b>Parameters</b>	<a href="#">osid.type.Type</a>	stringMatchType	a string match type
<b>Return</b>	<a href="#">boolean</a>	true if the given string match type is supported, false otherwise	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
	<a href="#">NULL_ARGUMENT</a>	stringMatchType is null	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getStringExpression</b>		
<b>Description</b>	Gets the regular expression of an acceptable string for the given string match type.		
<b>Parameters</b>	<a href="#">osid.type.Type</a>	stringMatchType	a string match type
<b>Return</b>	<a href="#">string</a>	the regular expression	
<b>Errors</b>	<a href="#">NULL_ARGUMENT</a>	stringMatchType is null	
	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
	<a href="#">UNSUPPORTED</a>	supportsStringMatchType(stringMatchType) is false	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getStringFormatTypes</b>		
<b>Description</b>	Gets the set of valid string formats.		
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the set of valid text format types	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getStringSet</b>		
<b>Description</b>	Gets the set of acceptable string values.		
<b>Return</b>	<a href="#">string[]</a>	a set of strings or an empty array if not restricted	
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING	
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.	
<b>Method</b>	<b>getDefaultStringValues</b>		

<b>Description</b>	Gets the default string values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">string[]</a>	the default string values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingStringValue</b>	
<b>Description</b>	Gets the existing string values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">string[]</a>	the existing string values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a STRING or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumTime</b>	
<b>Description</b>	Gets the minimum time value.	
<b>Return</b>	<a href="#">osid calendaring.Time</a>	the minimum time
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumTime</b>	
<b>Description</b>	Gets the maximum time value.	
<b>Return</b>	<a href="#">osid calendaring.Time</a>	the maximum time
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getTimeSet</b>	
<b>Description</b>	Gets the set of acceptable time values.	
<b>Return</b>	<a href="#">osid calendaring.Time[]</a>	a set of times or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TIME
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultTimeValues</b>	
<b>Description</b>	Gets the default time values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid calendaring.Time[]</a>	the default time values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TIME or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingTimeValues</b>	
<b>Description</b>	Gets the existing time values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid calendaring.Time[]</a>	the existing time values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TIME or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getTypeSet</b>	
<b>Description</b>	Gets the set of acceptable Types.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	a set of Types or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TYPE
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultTypeValues</b>	
<b>Description</b>	Gets the default type values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the default type values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TYPE or isRequired() is true
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.

<b>Method</b>	<b>getExistingTypeValues</b>	
<b>Description</b>	Gets the existing type values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the existing type values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TYPE or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getVersionTypes</b>	
<b>Description</b>	Gets the set of acceptable version types.	
<b>Return</b>	<a href="#">osid.type.Type[]</a>	the set of version types
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a VERSION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>supportsVersionType</b>	
<b>Description</b>	Tests if the given version type is supported.	
<b>Parameters</b>	<a href="#">osid.type.Type</a>	versionType
<b>Return</b>	<a href="#">boolean</a>	true if the type is supported, false otherwise
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a> <a href="#">NULL_ARGUMENT</a>	syntax is not a VERSION versionType is null
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMinimumVersion</b>	
<b>Description</b>	Gets the minimum acceptable Version.	
<b>Return</b>	<a href="#">osid.installation.Version</a>	the minimum Version
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a VERSION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getMaximumVersion</b>	
<b>Description</b>	Gets the maximum acceptable Version.	
<b>Return</b>	<a href="#">osid.installation.Version</a>	the maximum Version
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a VERSION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getVersionSet</b>	
<b>Description</b>	Gets the set of acceptable Versions.	
<b>Return</b>	<a href="#">osid.installation.Version[]</a>	a set of Versions or an empty array if not restricted
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a VERSION
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getDefaultVersionValues</b>	
<b>Description</b>	Gets the default version values. These are the values used if the element value is not provided or is cleared. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.installation.Version[]</a>	the default version values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a TIME or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
<b>Method</b>	<b>getExistingVersionValues</b>	
<b>Description</b>	Gets the existing version values. If hasValue() and isRequired() are false, then these values are the default values. If isArray() is false, then this method returns at most a single value.	
<b>Return</b>	<a href="#">osid.installation.Version[]</a>	the existing version values
<b>Errors</b>	<a href="#">ILLEGAL_STATE</a>	syntax is not a VERSION or isValueKnown() is false
<b>Compliance</b>	<a href="#">mandatory</a>	This method must be implemented.
